

Information Systems Specialist

Responsible for performing a variety of diversified duties involving development, implementation, and support of multi-user client-server computer information systems. Works with users and information systems department staff to identify application needs and to determine and implement the appropriate solutions. Focuses on developing and maintaining information systems with emphasis on programming against a multi-user relational database. Proficiency with VB.NET, object oriented programming, stored procedures and functions, and Crystal Reports is a must. Experience with networked, multi-user applications in a windows based client-server environment. Working knowledge of Microsoft SQL Server back end databases. Degree and 5+ years experience or equivalent.

Applicants subject to background investigation/drug screen urinalysis testing.
